S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

AD301	BSC	Linear Algebra and Fuzzy Set Theory	3.1.0	2 Credits
-------	-----	-------------------------------------	-------	-----------

Teaching Scheme:	Examination Scheme:
Lecture: 3hrs week Tutorial: 3 hours/week	Mid Semester Exam: 70 Marks End Semester Exam: 50 Marks CA 1 & CA 2 - 20 Marks Term Work - Oral Exam - Practical and Oral Exam -

Pre-Requisites: Basic Logic, Set, Graph related concepts

Course Outcomes: At the end of the course, students will be able to:

CO1	Apply various interpolation methods and finite difference concepts and also Apply numerical integration techniques whenever and wherever routine methods are not applicable.
CO2	Solve the system of simultaneous linear equations by direct & iterative methods and also solve algebraic and transcendental equations by numerical techniques
CO3	Determine whether a given structure is vector space, subspace structure and will be able to determine basis and dimension of vector spaces
CO4	Find the orthogonalization in inner product spaces and find eigenvalues, eigenvectors and Diagonalization and apply Diagonalization to find powers of matrices, etc
CO5	Differentiate the ordinary sets and fuzzy set
CO6	Apply the concepts of fuzzy theory in engineering

Mapping of course outcomes with program outcomes:

Course Outcomes	Program Outcomes													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PO13	PO14
CO1	2	2	-	-	-	-	-	-	-	-	1	2	-	-
CO2	2	2	*	*	*	*	*	*	*	*	1	2	-	-
CO3	1	2	*	*	*	*	*	*	*	*	1	2	-	-
CO4	1	2	-	-	-	-	*	*	*	*	1	2	-	-
CO5	2	2	-	*	*	*	*	*	*	*	2	2	-	-
CO6	2	2	-	*	*	*	*	*	*	*	1	2	-	-

Course Contents:

Unit 1: Interpolation and Numerical Integration [16]

Finite differences: Interpolation/extrapolation using Newton's forward and backward difference formulas, Newton's divided difference and Lagrange's formulae (All formulae without proof). Numerical integration: Simpson's $(1/3)^{\text{rd}}$ rule, Simpson's $(3/8)^{\text{th}}$ rule and Weddle's rule (without proof) Problems.

Unit 2: Solution of Simultaneous linear, transcendental & algebraic equations [16]

Gauss elimination method, Gauss-Jordan method, Iterative method of relaxation- Jacobi iteration method, Gauss-Seidel iteration method. Solution of Algebraic and Transcendental Equation: Bisection method, Method of false position, Secant method and Newton-Raphson method.

Unit 3: Vector Spaces

The n-dimensional Vectors: Vector space, linear dependence of vectors, Basis and dimension, Linear transformation-range and kernel of a linear map, rank and nullity - rank and nullity theorem inverse of a linear transformation-composition of linear map-Matrix associated with a linear map.

Introduction to Eigen values and Eigen vectors of a matrix- Eigen basis - Diagonalization- Inner product space Norm of a vector Normed vector space Orthogonal and orthonormal sets Gram Schmidt orthogonalization process.

Unit 5: Introduction to Fuzzy sets

[5]

Basic concepts of Fuzzy sets, Crisp set and Fuzzy set; Membership functions; Basic operations on fuzzy sets; Properties of fuzzy sets.

Unit 6: Fuzzy Arithmetic

[5]

Fuzzy numbers; Fuzzy cardinality; Operations on Fuzzy number; Fuzzy equations of type $A \circ X = B$ and $A \circ X = B$.

Text Books:

2. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons.
3. B. V. Ramana, Higher Engineering Mathematics, McGraw-Hill Publications, New Delhi.
4. C. R. Wylie & L. C. Barrett, Advanced Engineering Mathematics, McGraw-Hill Publishing Company Ltd.
5. Fuzzy sets and Fuzzy Logic by George J. Klir, BoYuan.
6. S. Kumaresan, Linear Algebra - A Geometric Approach, Prentice Hall Ltd.
7. Linear Algebra by Vivek Sahai and Vikas Bist, Panjabra Alpha Science, 2002.

SY. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

AD302	PCC	Discrete Mathematics Structures	3-1-0	4 Credit
-------	-----	---------------------------------	-------	----------

Teaching Scheme:	Examination Scheme:
Lecture: Short & Stark	Mid Semester Exam: 30 Marks
Tutorial: the weak	End Semester Exam: 50 Marks
	CA 1 & CA 2: 20 Marks
	Term Work — Oral Exam — Practical and Oral Exam —

Pre-Requisites: Basic Logic, Set, Graph related concepts

Course Outcomes: At the end of the course, students will be able to:

CO1	Illustrate the logic and set concepts
CO2	Make use of the algebraic structures and morphism
CO3	Categorize the various graphs, path and representation techniques
CO4	Analyze rooted trees, binary search tree and minimal spanning trees
CO5	Solve mathematical problems on combinatorics
CO6	Illustrate fundamental structure of mathematical induction

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	2		*	*	*	*	-	2	-	-	-	1	2	-
CO2	2	2	*	-	-	*	*	-	2	-	-	-	1	2	-
CO3	2	2	-	-	-	*	*	-	2	-	-	-	1	2	-
CO4	2	3	*	-	*	*	*	*	2	*	*	*	1	2	*
CO5	2	2	-	-	*	*	*	*	2	-	-	-	1	2	-
CO6	2	2	-	-	*	*	*	*	2	-	-	-	1	2	-

Course Contents:

Unit 1: Mathematical Logic and Set Theory: Propositional logic, Logical connectives, Truth tables, Equivalence of formulas and Tautological Implications, Normal forms, Validity, Predicate logic, Universal and existential quantification, Sets-Definition, types and operation, Venn diagram, Cartesian product, relations, properties of binary relations, partition and covering of sets, equivalence relation, composition, POSET, Function	[8]
Unit 2: Algebraic systems: Algebraic Structures with one Binary Operation, Semi Groups, Monoids, Groups, Free and Cyclic Monoids and Groups, Permutation Groups, Substructures, Normal Subgroups, Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields, Boolean algebra and Boolean Ring, Representation of Boolean Function	[8]
Unit 3: Graph Theory: Basic terminology, Multi graphs and weighted graphs, Paths and circuits, Spanning path problems, Euler and Hamiltonian paths, Representation of graph, Isomorphic graph, Connectedness, Matching Covering, PERT techniques	[12]
Unit 4: Trees: Rooted trees, Path length in rooted tree, Binary search trees, Spanning trees and cut set, Minimal spanning trees, Kruskal's and Prim's algorithms for minimal spanning tree	[14]
Unit 5: Permutations, Combinations and Discrete Probability: rule of sum and product, Permutations, Combinations, Discrete Probability, Conditional Probability, Bayes' Theorem, Cardinality and countability, Counting	[14]
Unit 6: Principles of Mathematical Induction: The Well-Ordering Principle, Recursive definition, Division algorithm, Prime Numbers, The Greatest Common Divisor, Euclidean Algorithm, The Fundamental Theorem of Arithmetic, Recurrence relations, generating functions	[14]

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

ADH0	PCC	Data Structure	3-0-0	3 Credits
------	-----	----------------	-------	-----------

Teaching Scheme:	Examination Scheme:
Lecture: Theory Tutorial: -	CA1- 10 Marks CA2-10Marks Mid Semester Exam: 30 Marks. End Semester Exam: 50 Marks

Pre-Requisites: Basic Logic, Set, Graph related concepts

- CO1 Outline the basics of data structure and its application.
- CO2 Outline Concepts of searching and sorting
- CO3 Apply Concepts of stack, queue and solve real-time problems
- CO4 Demonstrate the concepts of Linked List and apply various operations on them.
- CO5 Demonstrate the concepts of Trees and apply various operations on them
- CO6 Demonstrate Basic terminologies and representation of graph and Hashtab

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	1	1	1	-	-	-	-	1	-	-	-	1	-	-	1
CO2	2	2	<	1	-	1	-	1	-	1	-	1	1	-	-
CO3	1	1	<	-	-	1	-	1	-	1	-	1	-	-	-
CO4	2	2	2	1	-	2	-	1	-	1	-	1	-	-	-
CO5	1	1	-	-	-	1	-	1	-	1	-	1	-	1	-
CO6	2	2	2	1	-	1	-	1	-	1	-	1	-	-	1

Course Contents:

Unit 1: Introduction to Data Structure

Basic Terminology: Elementary data structure organization: Classification of data structures. Operations on data structures: Traversing, Inserting, deleting · Searching, sorting, merging Different Approaches to designing an algorithm · Top-Down approach · Bottom-up approach Complexity · Time complexity · Space complexity · Big 'O' Notation

[6]

Unit 2: Sorting and Searching Techniques

Introduction, Selection sort, Insertion sort, Bubble sort, Merge sort, Radix sort (Only algorithm), Shell sort (Only algorithm) Quick sort (Only algorithm), Searching · Linear search, Binary search

[6]

Unit 3: Introduction to stack and Queue

Stack as an abstract data type · Representation of stack through arrays, Applications of Stack, Reversing a list, Polish notations, Conversion of infix to postfix expression, Evaluation of postfix expression, Converting an infix into prefix expression, Evaluation of prefix expression, Recursion, Introduction · Queues as an abstract data type · Representation of a Queue as an array, Types of Queue, · Circular Queue · Double Ended Queue · Priority Queue · De-queues, Applications of Queue

[6]

Unit 4: Linked List

Introduction Terminologies: node, Address, Pointer, Information, Next, Null Pointer, Empty list etc. Type of lists · Linear list · Circular list · Doubly list 5.1 Operations on a simple linked list · Insertion algorithm · Traversing a singly linked list · Searching a linked list · Inserting a new node in a linked list · Deleting a node from a linked list

[6]

Unit 5: Tree Introduction Terminologies

[6]

Tree, degree of a node, degree of a tree, level of a node, leaf node, Depth / Height of a tree, In-degree & out-Degree, Directed edge, Path, Ancestor & descendant nodes. Type of Trees: General tree, binary tree, Binary search tree (BST), Binary tree traversal (only algorithm) – In-order traversal - Preorder traversal - Post order traversal; Expression tree

Unit 6: Graph and Hashing

[6]

Introduction, Terminologies: graph, node (Vertices), arcs (edges), directed graph, in-degree, out-degree, adjacent, successor, predecessor, relation, weight, path, length. Representation of a graph: Array Representation, Linked list Representation, Traversal of graphs, Depth-first search (DFS), Breadth-first search (BFS). Applications of Graph Hashing, Hash function, Collision resolution techniques

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester-II

AD104	POC	Operating System	4-4-1	1 Credit
-------	-----	------------------	-------	----------

Teaching Scheme:	Examination Scheme:
Lecture: 35 hours Tutorial: -	CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 30 Marks End Semester Exam: 50 Marks

Pre-Requisites: Basic Logic, Set, Graph related concepts

CQ1	Explain the basic concept of operating system & their types.
CQ2	Illustrate the flow of process with its states and different process scheduling policies.
CQ3	Explain concepts of Mutual exclusion and IPC.
CQ4	Make use the concept of deadlocks.
CQ5	Illustrate concept of memory management policies.
CQ6	Illustrate the concepts of Unix and Linux OS.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PO13	PO14
CO1	1	1	1	-	-	-	-	1	-	-	-	-	1	-
CO2	2	2	1	2	-	-	-	1	-	1	-	1	1	-
CO3	2	2	1	1	-	1	-	1	-	1	-	1	1	-
CO4	2	2	2	1	-	1	-	-	-	1	-	1	1	-
CO5	2	2	2	2	1	-	-	-	-	1	-	2	2	2
CO6	2	2	2	2	1	-	-	-	-	1	-	2	2	2

Course Contents:

Unit 1 Introduction: Basics of Operating Systems: Definition - Generations of Operating systems - Types of Operating Systems. OS Service, System Calls, OS structure: Layered, Monolithic, Microkernel Operating Systems - Concept of Virtual Machine	[84]
Unit 2 Process Management: Processes: Definition , Process Relationship , Process status , Process State transitions , Process Control Block , Context switching - Threads - Concept of multithreads , Benefits of threads . Types of threads Process Scheduling: Definition, Scheduling objectives , Types of Schedulers Scheduling criteria - CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time (Definition only) Scheduling algorithms - Preemptive and Non-preemptive , FCFS - SJF- RR . Multiprocessor scheduling : Types , Performance evaluation of the scheduling.	[85]
Unit 3 Inter-process Communication: Race Conditions, Critical Section, Mutual Exclusion, Hardware Solution, Short Algorithm, Peterson's Solution, The Producer Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem etc.	[84]
Unit 4 Deadlocks: Definition, Deadlock characteristics, Deadlock Prevention, Deadlock Avoidance: banker's algorithm, Deadlock detection and Recovery.	[83]
Unit 5 Memory Management: Basic Memory Management: Definition , Logical and Physical address map , Memory allocation Contiguous Memory allocation - Fixed and variable partition - Internal and External fragmentation Compaction , Paging: Principle of operation - Page allocation - (Hardware support for paging).	

Protection and sharing – Disadvantages of paging

Virtual Memory:

Basics of Virtual Memory - Hardware and control structures – Locality of reference, Page fault , Working Set , Dirty page/Dirty bit – Demand paging (Concept only) – Page Replacement policies : Optimal (OPT) , First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU).

Unit 6 Unix/Linux Operating System

Development of Unix/Linux, Role & Function of Kernel, System Calls, Elementary Linux command & Shell Programming, Directory Structure, System Administration Case study- Linux, Windows Operating Systems

[W3]

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

AIDS	SEM	Digital Electronics & Microcontroller	S.O.I	3 Credit
Teaching Scheme:		Examination Scheme:		
Lecture: 36 weeks Tutorial:-		CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 30 Marks End Semester Exam: 50 Marks		

Pre-Requisites: Basic Electronics.**Course Outcomes:** At the end of the course, students will be able to:

CO1	Explain the different logic gates and different number system operations.
CO2	Explain different combinational logic circuits.
CO3	Make use of flip flops to build different converters and counters.
CO4	Develop assembly language program for arithmetic & logical operations using 8051.
CO5	Apply concepts of serial communication, timers & interrupts using I/O ports.
CO6	Make use of 8051 for interfacing External Peripherals.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	2	-	-	1	-	-	1	1	-	1	1	1	1
CO2	2	2	-	-	1	-	-	1	1	-	1	1	1	1
CO3	2	2	-	-	1	-	-	1	1	-	1	1	1	1
CO4	3	2	-	-	1	-	-	1	1	-	-	1	2	2
CO5	3	2	-	-	1	-	-	1	1	-	-	1	2	2
CO6	3	2	-	-	1	-	-	1	1	-	-	1	2	2

Unit 1: Logic Gates and Number Systems)

Analog Signal, Analog Circuits, Digital signals, digital circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, examples of IC gates, Boolean algebra, Number Systems: binary, signed binary, octal, hexadecimal number, Number System Conversion, binary arithmetic, one's and two's complements arithmetic.

[6]

Unit 2: Combinational Digital Circuits:

Standard representation for logic functions, K-map representation and simplification of logic functions using K-map, minimization of logical functions, Don't care conditions, multiplexers, Demultiplexers, Decoders/Decoders, Adders, Subtractors, BCD arithmetic, carry look ahead adder, serial adder.

[6]

Unit 3: Sequential circuits and systems:

A 1-bit memory, the circuit properties of D-latch, the clocked SR flip-flop, D, J-K, and T type flip-flops, Shift registers, serial to parallel converter, parallel to serial converter, ring counter, Ripple (Asynchronous) counters, synchronous counters, counter design using flip-flops, asynchronous sequential counters.

[6]

Unit 4: 8051 Microcontroller Architecture and Instruction Set

Functional block diagram and pin diagram of 8051, Power supply, clock and reset circuit, Program Counter and RAM space in 8051, Program and Data Memory organization, addressing modes, Instruction Set: data transfer, arithmetic and logical, program control instructions and Boolean variable manipulation.

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

A3306	PCV	Problem Solving Using Python Programming	B401	1 Credit
Teaching Scheme:		Examination Scheme:		
Lecture:-		PA, CA 1 & CA 2: 30 Marks		
Tutorial:-		Practical and Oral Exam:-20 Marks		
Practical: Three week				

Pre-Requisites: Basic Electronics.

Course Outcomes: At the end of the course, students will be able to:

C01	Describe the numbers, math functions, strings, tuples and lists in Python.
C02	Explain different decision-making statements and Functions.
C03	Interpret object-oriented programming in Python.
C04	Demonstrate and summarize different file handling operations.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PO13
CO1	2	2	-	-	1	-	-	1	1	-	1	1	1
CO2	2	2	-	-	1	-	-	1	1	-	1	1	1
CO3	2	2	-	-	1	-	-	1	1	-	1	1	1
CO4	2	2	-	-	1	-	-	1	1	-	1	2	2

Practical List:

1.	Write a program to demonstrate basic data type in python.
2	A program to calculate distance between two points taking input from user. Write a python module copy that takes 2 numbers as command line arguments and prints its sum.
3.	Write a Program for checking whether the given number is an even number or not. Using a for loop.
4.	Write a Program to demonstrate list and tuple in python. Write a program using a for loop that loops over a sequence. Write a program using a while loop that asks the user for a number, and prints a countdown from that number to zero.
5.	Find the sum of all the primes below two million. By considering the terms in the Fibonacci sequence whose values do not exceed four million, WAP to find the sum of the even-valued terms.
6.	Write a program to count the numbers of characters in the string and store them in a dictionary data structure. Write a program to use split and join methods in the string and trace a birthday of a person with a dictionary data structure.
7.	Write a program to count frequency of characters in a given file. Can you use character frequency to tell whether the given file is a Python program file, C program file or a text file? Write a program to count frequency of characters in a given file. Can you use character frequency to tell whether the given file is a Python program file, C program file or a text file?
8.	Write a program to print each line of a file in reverse order. Write a program to compute the number of characters, words and lines in a file.
9.	Write a program to compute the number of characters, words and lines in a file.
10	Python3 program to show that the variables with a value assigned to the class declaration, are class variables and Variables defined in methods and constructors are instance variables.

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

AD307	PUC	Data Structure Laboratory	B.E.	3 Credits
Teaching Scheme:	Examination Scheme: CA1: 15 Marks CA2: 15 Marks Practical and Oral Exam—20 Marks			

Practical List:

S. No	List of Experiments
1	Write a program for traversing of array. a) To define an integer array of 10 elements and display it. b) To define 2*2 array and display it in matrix form.
2	Write a program to perform operations on an array. a) Insertion of element in array b) Deletion of element from array.
3	Write a program to search a number in an array of 10 elements. a) Linear Search b) Binary Search
4	Write C programs for implementing the following sorting methods to arrange a list of integers in ascending order: a) Bubble sort b) Selection sort c) Insertion sort
5	a) Write a program to implement stack operation using array. b) Write a program to implement LIFO to Postfix using Stack.
6	a) Write a program to implement linear queue operation using array. b) Write a program to implement Circular queue operation using array.
7	a) Write a program to create singly linked list. b) Write a program to create doubly linked list.
8	Write a program to create binary tree and perform In order, Pre order and Post Order
9	Write a program to create a graph of n vertices using an adjacency list.
10	Write a program to search an element using hashing techniques.

AD008	POC	Operating System Laboratory	9.01	Credit
-------	-----	-----------------------------	------	--------

Teaching Scheme:	Examination Scheme:
Practical: 2hr/week	CA1: 15 Marks CA2: 15Marks Practical and One Exam:-20 Marks

Practical List:

List of Practical	
1.	Study of different Operating System.
2.	Hands on UNIX/LINUX commands.
3.	Shell programming for file handling.
4.	Shell script programming using the commands grep, awk and sed.
5.	Implementation of different scheduling algorithms.
6.	Write a program to implement Producer consumer problem.
7.	Write a program to simulate Bankers Algorithm for the purpose of Deadlock avoidance.
8.	Implementation of various page replacement policies.
9.	Implementation of synchronization primitives-semaphores, locks and conditional variables.
10.	Implementation of various memory allocation algorithms.

SY. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

AD08	PCC	Digital Electronics and Microcontroller Laboratory	0.01	1 Credits
Teaching Scheme:		Examination Scheme:		
Practical: 2hr/week		CA1 - 15 Marks CA2 - 15 Marks Practical and Oral Exam - 20 Marks		

Practical List:

- Implementation of logic gates using universal gates.
- Realization of half/full adder & half/full subtractor using logic gates.
- Realization of parallel adder/subtractors using 7483 chip.
- MUX/DEMUX – use of 74151, 74139 for arithmetic circuits
- Truth table verification of flip-flops.
- Arithmetic and Logical operations using 8051 Microcontroller.
- LPDs interfacing to 8051 Microcontroller with Timer Interrupt.
- LCD Interfacing to 8051 Microcontroller.
- Keyboard Interfacing to 8051 Microcontroller.
- Stepper Motor Interfacing to 8051 Microcontroller.

MDCO	AIC	Environmental Sciences	Lab	Audit
Teaching Scheme		Examination Scheme		
Lecture: 2 hrs/week		CA1:25 Marks CA2:25 Marks		

Pre-Requisites: NA

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain various natural resources and associated Problems
CO2	Summarize various ecosystems
CO3	Explain the importance of conservation of biodiversity and its importance in balancing the earth.
CO4	Recognize various causes of environmental pollution along with various protection acts in India to limit the pollution
CO5	Extract the information based of field study and prepare a report

Mapping of course outcomes with program outcomes

HMS01	HSMC	Aptitude Skills- I	1-0-0	1 credit
-------	------	--------------------	-------	----------

Teaching Scheme:	Examination Scheme:
Lecture: 1 hr/week	CA1: 25 marks
Tutorial: NA	CA2: 25 marks
Practical: NA	

Pre-Requisites: Communication Skills

Group A Aptitude (12Hrs)

Course Objectives:

1	To study multiplications, squares, square roots, cubes and cubic roots to solve aptitude problems
2	To understand the concepts of Number system
3	To study the basics of aptitude skills like percentage, average, ratio and proportion,
4	To study the various speed, time and distance basic concepts
5	To understand the concepts of business aptitude
6	To understand the Concepts of Geometry and Venn diagram in Aptitude

Course Outcomes: At the end of the course, students will be able to:

1	Understand speed math techniques to solve aptitude problems
2	Summarize number systems in detail.
3	Explain basic aptitude techniques related to Percentage, Average, Ratio Proportion and Fractions
4	Understand speed, time and distance concepts
5	Summarize the concepts of Business aptitude using basic aptitude
6	Solve the aptitude problems on Geometry and Venn Diagram

Japanese Language Course I (24Hrs)

Course Objectives:

This course is designed to introduce students to the everyday language of Japan. Lessons will be organized around cultural conversational topics, leading students from fundamental aspects of grammar to readings in simple texts.

Course Outcomes: At the end of the course, students will be able to:

- | | |
|---|--|
| 1 | Explain the history and scripts used in Japanese |
| 2 | Translate simple English words into Japanese |
| 3 | Express themselves by using simple sentences and responses to questions. |
| 4 | Demonstrate Japanese scripts through oral and written communication |

Foreign Languages (Any One)

German Language Course I

(24Hrs)

Course Objectives:

This course provides an opportunity to enhance acquisition of the fundamental elements of the German language. Emphasis is on the progressive development of basic listening, speaking, reading, and writing skills through the use of supplementary learning media and materials.

Course Outcomes: At the end of the course, students will be able to:

1	Summarize the simple German words used for daily used words
2	Translate simple English words into German
3	Express themselves by using simple sentences and responses to questions
4	Demonstrate German scripts through oral and written communication.

Mapping of course outcomes with programs outcomes

Course Outcomes	Program Outcomes													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1										1		1		
CO2										1		1		
CO3										2		1		
CO4										2		1		

Course Contents:

Unit1: Introduction Introduction of the language, Greetings, introduce oneself, speaking about yourself and others, numbers, E-mail address, Alphabets, speaking about countries and languages. Speaking about: Hobbies, to have an informal appointment/ learning weekdays, months and seasons	[6]
Unit 2: Simple Word forming Speaking about professions, work and war-times, learning to fill up a profile in German. Learning to name the famous places, buildings in a city, learning definite/ indefinite and negative articles in German, to name the modes of transportation. To learn to describe the way, to understand the texts with international words.	[6]
Unit 3: Simple sentence forming To speak about food, to plan a shopping, conversation with the shopkeeper. Conversation about the food, about likes and dislikes, to understand the "w" questions. To understand the watch timings , giving information about time, speaking about the families, to plan a date	[6]

Unit 4: Simple interactions

[6]

Learning about punctuality in Germany and how to excuse for delay, telephonic conversation about the appointments. To plan something together, speaking about birthday, to understand invitation and to write an invitation, to order and to pay in restaurant, to speak about own experiences. To understand particular information from the texts, to understand about different events and events related information at Radio

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester III

PROJ02	PROJ	Mini Project II	8-0-2	Audit
--------	------	-----------------	-------	-------

Teaching Scheme:	Examination Scheme:
Practical: 2hr/week	CA1:25Marks CA2:25Marks

Pre-Requisites: Basic knowledge of Communication skills (LSRW).

Course Outcomes: At the end of the course, students will be able to:

CO1	Acquire practical knowledge within the chosen area of technology for project development
CO2	Identify, analyze and handle programming projects with a comprehensive and systematic approach
CO3	Contribute as an individual or in a team in development of technical projects
CO4	Develop effective communication skills for presentation of project related activities
CO5	Formulate and propose a plan for creating a solution for the problem identified

Course Contents:

The mini- should be preferably by Students who will jointly work and implement the mini-project. The group will select a project with the approval of the guide. Students who will jointly work and implement the mini-project. The group will select a project with the approval of the guide.

A batch of practical / Tutorial will be divided into mini project groups. Mini project topics and the work for these groups in the batch will be guided by a teacher for the batch, preferably on one of the topics like Compiler Construction, Database Engineering, Operating System, Computer Graphics and Multimedia, Advanced Programming and latest developments and trends in Computer Science and Technology.

S.Y. (ARTIFICIAL INTELLIGENCE & DATA SCIENCE) Semester IV

AD401	BSC	Probability and Statistics	1-0-0	05 Credits
-------	-----	----------------------------	-------	------------

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 30 Marks End Semester Exam: 50 Marks

Pre-Requisites: Basic Mathematics skills**Course Outcomes:** At the end of the course, students will be able to

CO1	Apply the concepts of probability to solve engineering problems.
CO2	Illustrate and formulate fundamental probability distribution and density functions, as well as functions of random variable.
CO3	Apply different methods to find the correlation between the variables.
CO4	Develop basic mathematical tools for regression analysis.
CO5	Develop basic mathematical tools for fitting of curves like linear and non-linear curve.
CO6	Develop basic mathematical tools for Queuing theory.

Mapping of course outcomes with program outcomes

Course Outcome	Program Outcomes												
	PPO1	PPO2	PPO3	PPO4	PPO5	PPO6	POR1	POR2	POR3	POR4	PSO1	PSO2	PSO3
CO1	2	2			1		1			1			
CO2	2	2			1		1			1			
CO3	2	2			1		1			1			
CO4	2	2			1		1			1			
CO5	2	2			1		1			1			
CO6	2	2			1		1			1			

Course Contents

Unit 1: Basic Probability Definition and concept of probability. Addition theorem of probability. Multiplication theorem of probability (Without proofs). Examples. Random variables. Probability distributions. Probability mass function. Probability density function. Mathematical expectation. Joint and marginal probability distributions. Properties of expectation and variance with proofs.	[7]
Unit 2: Theoretical Probability Distributions Binomial distribution. Poisson distribution. Normal distribution. Fitting of binomial distribution. Properties of binomial, Poisson and normal distributions. Relation between binomial and normal distributions. Relation between Poisson and normal distributions. Importance of normal distribution. Examples.	[11]
Unit 3: Correlation Introduction. Types of correlation. Correlation and causation. Methods of studying correlation. Karl Pearson's correlation coefficient. Spearman's rank correlation. Coefficient. Properties of Karl Pearson's correlation coefficient and Spearman's rank correlation coefficient. Probable errors.	[6]

Unit 4: Linear Regression Analysis Introduction, Linear and non-linear regression, Lines of regression, Derivation of regression lines of y on x and x on y , Coefficients of regression, Properties of regression coefficient.	[6]
Unit 5: Applied Statistics Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and Exponential curves. Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviation.	[7]
Unit 6: Queuing Theory Introduction, Queuing systems, The input or arrival pattern, The service pattern and service discipline, Notation, Performance measures, Little's formula, Relation between the probabilities of states, M/M/1-a systems, Examples.	[7]

S.Y. (ARTIFICIAL INTELLIGENCE & DATA SCIENCE) Semester IV

AD402	PCC	Database Technologies	3+0=0	3 Credits
Teaching Scheme: Lecture: 3hrs/week	Examination Scheme: CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 30 Marks End Semester Exam: 50 Marks			

Pre-Requisites: Knowledge of MS-Access**Course Outcomes:** At the end of the course, students will be able to:

CO1	Build conceptual data model using Entity Relationship Diagrams
CO2	Construct normalized database schemas
CO3	Make use of SQL commands to develop database
CO4	Apply triggers on databases and develop procedure and function using PL-SQL
CO5	Demonstrate database administration skills
CO6	Demonstrate NoSQL Database for applications

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	1	1									1	1
CO2	2	1	1	1					1	1				1
CO3	1	1	2						1	2			1	
CO4	1	2	2	1					1	1				1
CO5	2	2	2		1				1	1			1	1
CO6	2	2	2		1				1					1

Course Contents:

Unit 1: Introductory concepts of DBMS Introduction and applications of DBMS, types of Data, Data Independence, Database Security, architecture and view levels, Mapping cardinalities, Database users and DBA roles, Structure of relational databases, Domains, Entity-Relationship model, Basic concepts, Domains, primary constraints, Keys, Design issues, E-R diagrams, weak entity sets, extended E-R families – generalization, specialization, aggregation, reduction to E-R database schema.	[5]
Unit 2: Relational Database Design The purposes of Normalization, Data Redundancies and Update Anomalies, Functional Dependencies – types of functional dependency, closure of set of functional dependency, canonical cover, The Process of Normalization: First Normal Form, Second Normal Form, Third Normal Form, Boyce-Codd Normal Form, Fourth Normal Form, Fifth Normal Form.	[6]
Unit 3:SQL Concepts Basics of SQL, DDL,DML,DCL structure – creation, alteration, defining constraints – Primary key, foreign key, unique, not null, check, Functions – aggregate functions, Built-in functions – numeric, date, string functions, set operations, sub-queries, Use of group by, having, order by, join and its types, view and its types, Transaction control commands – Commit, Rollback, Savepoint.	[6]

Unit 4:PL/SQL Programming Introduction of PL/SQL. The PL/SQL block structure, PL/SQL execution environment. PL/SQL Data types, Variables, Constants. Control structure: Conditional control, Iterative control, Sequential control. Exception handling: Predefined Exception, User defined Exception; Cursors: Implicit and Explicit cursors, Declaring, Opening and Closing a cursor, Fetching a Record from cursor, Cursor for loops, parameterized cursors. Procedures, Functions, Database Triggers	[8]
Unit 5: Transaction management and Concurrency control Transaction concept, A simple transaction model, ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping model, Recovery systems- Failure Classification, Startup, Recovery and Atomicity, Recovery Algorithm, checkpoint, Shadow pages.	[6]
Unit 6:NoSQL Programming Introduction to NoSQL Database, Types and examples of NoSQL, Database- Key value store, document store, graph, Performance, Distribution Models, Structured versus unstructured data, Comparative study of SQL and NoSQL, NoSQL Data Models, MapReduce Case Study-unstructured data from social media.	[5]

Text Books: <ol style="list-style-type: none"> 1. Abraham Silberschatz, Henry F. Korth, S. Sudarshan, Database Systems Concepts, 6th Edition, McGraw-Hill International Edition, 2011. 2. Pramod J. Sadalage, Martin Fowler, "NoSQL Distilled-A Brief Guide to the Emerging World of Polyglot Persistence", Pearson Education Inc, 2015.
Reference Books: <ol style="list-style-type: none"> 1. Date CJ, Karanikas A, Sivaraman S, An Introduction to Database Systems, 8th Edition, Pearson Education, 2006. 2. Raghu Ramakrishna, Johannes Gehrke, Database Management Systems, 3rd Edition, McGraw Hill, 2003. 3. Ramez Elmasri, Durmusul VLN Suryazulu, Shamkant B Navath, Shyam K. Gupta, Fundamentals of Database Systems, 4th Edition, Pearson Education, 2006. 4. Dan Sullivan, "NoSQL For Mere Mortals", Addison-Wesley Professional, 1st Ed., Apr, 2015.

S.Y. (ARTIFICIAL INTELLIGENCE & DATA SCIENCE) Semester IV

AB403	PCC	Java Programming	3-0-0	3 Credits
Teaching Scheme:	Examination Scheme:			
Lecture: 3hrs/week	CA1: 10 Marks CA2: 10Marks Mid Semester Exam: 30 Marks End Semester Exam: 50 Marks			

Pre-Requisites: basic programming skills(C/C++)

Course Outcomes: At the end of the course, students will be able to:

CO1	Develop programs using object-oriented methodology in java.
CO2	Apply concept of inheritance for code reusability.
CO3	Develop program using multi-threading.
CO4	Implement exception handling.
CO5	Develop programs for handling I/O and file streams.
CO6	Develop programs using graphics and applets.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12(PSO1)	PSO2(PSO2)
CO1	1	1	1	1								1	1
CO2	2	1	2	1									
CO3	1	1	2								1		
CO4	1	2	2	1								2	
CO5	2	2	1									2	1
CO6	2	2	1									2	1

Course Contents:

Unit 1: Basic Syntactical Constructs In Java Java features and java programming environment define class, create object and accessing members, java access, data types, constants, Variables dynamic initialization array string type casting etc. Operators, expression/operator precedence, evaluation of expression, mathematical functions. Decision making and looping – If, If-Else, nested If-Else, Switch case Conditional operator, While loop, do-while loop, for loop, Continue, return keywords, nesting loops.	[6]
Unit 2: Derived Syntactical Construct In Java Constructors and Methods, Types of constructors, Nesting of Methods, This keyword, command line argument, garbage collection, finalize() method, object Class Visibility control –private, public and protected. Friendly private protected access, default, Examples of visibility control, Arrays and Strings – types of arrays, String classes and string buffers, Vectors, Wrapper classes and enumerated types	[6]
Unit 3: Inheritance, Interface And Package Inheritance and its types, Types of inheritance Operator overloading and operator overwriting. Dynamic method dispatch, Final variable and method Using super abstract methods and classes, static members Interfaces –define, implement, and access. Nested interfaces and examples Define package types of package naming and creating packages, accessing packages, Import statement, static import, adding class and interface to package.	[6]

Unit 4: Exception Handling and Multithreading

Errors and Exception, types of errors Try, catch, nested try catch Throw, finally statement, build-in exception , creating own exception Examples of exception handling Multithreaded programming – Creating threads – using extending thread class and runnable interface, Thread life cycle – wait(), notify(), sleep(), interrupt(), stop().

Thread exceptions, thread priority, methods Thread synchronization, thread communication, deadlock.

[6]

Unit 5: Managing Input Output Files In Java

Introduction and concept of stream, stream classes, Byte stream classes, input stream classes, output stream classes.

Examples of file handling using stream classes Character stream classes Using File I/O Class: NIO exceptions, creation of files, reading and writing files Handling primitive data types Examples of handling primitive data types

[6]

Unit 6: Graphics in Java

Introduction to applet-Applet, Applet Life Cycle. Example of Applet life cycle, bind parameters and unbinding Applet Graphics Programming – Classes, Line. Examples of graphic programming using Rectangles, circles. Examples of graphic programming using , arcs, polygons. Colors and Fonts- Examples of color settings setcolor(), getcolor(), setBackground() etc. Font Class- variables, methods, graphics class environment. Examples of graphic programming using Font methods.

S.Y. (ARTIFICIAL INTELLIGENCE & DATA SCIENCE) Semester IV

AD404	IICC	Data Communication and Networking	3-0-0	3 Credits
Teaching Scheme:	Examination Scheme:			

Pre-Requisites: Knowledge of MS-Access

Course Outcomes: At the end of the course, students will be able to:

CO1	Introduce the concepts of data communication.
CO2	Learn Data Communication Methods and Algorithms.
CO3	Introduce the layered model of the internet and its components.
CO4	Provide in-depth knowledge of physical layer and data link layer technologies.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PO13
CO1	2	1	1	1								1	1
CO2	2	1	2	1								1	
CO3	1	1	2									1	
CO4	1	2	2	1								2	

Course Contents:

Unit 1: Introduction: Data communication, networks, internet, protocols and standards, network models: OSI, TCP/IP, analog and digital data, periodic analog signal, digital signal, transmission impairments, data rate limits, performances. Signal conversion: digital-to-digital, analog-to-digital, analog-to-analog, digital-to-analog conversion.	[6]
Unit 2: Bandwidth Utilization and Transmission Media: Multiplexing spectral spectrum, guided media and unguided media.	[6]
Unit 3: Switching: Circuit switched networks, datagram networks, virtual circuit networks, structure of switch. Error Detection and Correction: Types of errors, redundancy, detection vs correction, fee vote transmission, coding, modular arithmetic, block coding, linear block codes, cyclic codes, checksum, hamming code.	[6]
Unit 4: Data Link Control: Framing, flow control and error control protocols, protocols: stop-and-wait go-back-n, selective repeat, piggybacking, HDLC, PPP.	[6]
Unit 5: Medium Access, Ethernet and LAN: Random access: ALOHA, CSMA, CSMA/CD, CSMA/CA, controlled access, tokenization/IEEE standards, different Ethernet, connecting devices, backbone networks, VLAN.	[6]
Unit 6: Multi-user digital: Modulation techniques such as frequency division multiple access (FDMA), time division multiple access (TDMA), code division multiple access (CDMA).	[6]

S.Y. (ARTIFICIAL INTELLIGENCE & DATA SCIENCE) Semester IV

Elective I

AD405A	PEC	R Programming	3.0-0	3 Credits
Teaching Scheme:		Examination Scheme:		
Lecture: 3 hrs/week		CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 30 Marks End Semester Exam: 90 Marks		

Pre-Requisites: Knowledge of CMS-Access

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basics in R programming in terms of constructs, control statements, string Functions
CO2	Understand the use of R for Big Data analytics
CO3	Learn to apply R programming for Text processing
CO4	Able to appreciate and apply the R programming from a statistical perspective
CO5	Demonstrate data interfacing with different files
CO6	Analyze fundamentals of R charts and graphs

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	2	1	1	1	2			1					1		1
CO2	2	1	2	1	1			1						1	
CO3	1	1	2		1			1					1		
CO4	1	2	2	1	1			1						2	
CO5	2	2	1		1			1					2	1	
CO6	2	1	1	1	1			1					1		1

Course Contents:

Unit 1: Introduction: Introducing to R – R Data Structures – Help functions in R – Vectors – Scalars – Declarations – recycling – Common Vector operations – Using all and any – Vectorized operations – NA and NULL values – Filtering – Vectorised if-then else – Vector Equality – Vector Element names	[6]
Unit 2: Matrices, Arrays and Lists Creating matrices – Matrix operations – Applying Functions to Matrix Rows and Columns – Adding and deleting rows and columns – Vector/Matrix Distinction – Avoiding Dimension Reduction – Higher Dimensional arrays – lists – Creating lists – General list operations – Accessing list components and values – applying functions to lists – recursive lists	[6]

Unit 3: Data Frames	[6]
Creating Data Frames – Matrix-like operations in frames – Merging Data Frames – Applying functions to Data frames – Factors and Tables – factors and levels – Common functions used with factors – Working with tables - Other factors and table related functions - Control statements – Arithmetic and Boolean operators and values – Default values for arguments – Returning Boolean values – functions are objects – Environment and Scope issues – Writing Upstairs - Recursion – Replacement functions – Tools for composing function code – Math and Simulations in R	
Unit4: OOP	[6]
S3 Classes – S4 Classes – Managing your objects – Input/output – accessing keyboard and monitor – reading and writing files – accessing the internet – String Manipulation – Graphics – Creating Graphs – Customizing Graphs – Saving graphs to files – Creating three-dimensional plots	

Text Books: 1. Norman Matloff "The Art of R Programming: A Tour of Statistical Software Design" Publication: No Starch Press, 2011 2. Jared P. Lander "R for Everyone: Advanced Analytics and Graphics" Publication: Addison-Wesley Data & Analytics Series, 2013	[6]
Reference Books: 1. Mark Gardener " Beginning R – The Statistical Programming Language" Publication: Wiley, 2013 2. Robert Knell "Introducing R: A Beginner's Guide to Data Visualisation, Statistical Analysis and Programming in R" Publication: Amazon Digital South Asia Services Inc, 2013	[6]

SY. (ARTIFICIAL INTELLIGENCE & DATA SCIENCE) Semester IV

Elective 2

AD405B	PEC	Information Security	3-0-0	4 Credits
Teaching Scheme:		Examination Scheme:		
Lecture: 3 hr/week		CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 30 Marks End Semester Exam: 50 Marks		

Pre-Requisites: Knowledge of Operating System

Course Outcomes: At the end of the course, students will be able to:

CO1	Identify security needs.
CO2	Apply cryptographic techniques in programs
CO3	To understand authorization and authentication.
CO4	Apply security in networks

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO 1	PSO 2	PSO 3
CO1	3	1	1	1	2				1				1		1
CO2	2	1	2	1	1				1					1	
CO3	1	1	2		1				1				1		
CO4	1	2	2	1	1				1					2	

Course Contents:

Unit 1: Introduction to Information Security: Attacks, Vulnerability, Security Goals, Security Services and mechanisms, Understand and apply concepts of confidentiality, integrity and availability. Evaluate and apply security governance principles. Alignment of security function to business strategy, goals, mission, and objectives. Organizational processes (e.g., acquisitions, divestitures, governance committees), Organizational roles and responsibilities, Security control frameworks, Due care/due diligence	[6]
Unit 2 Conventional Cryptographic Techniques : Conventional substitution and transposition ciphers, One-time Pad, Block cipher and Stream Cipher, Steganography	[6]
Unit 3 Symmetric and Asymmetric Cryptographic Techniques: DES, AES, RSA algorithms	[6]
Unit 4 Authentication and Digital Signatures : Use of Cryptography for authentication, Secure Hash function, Key management – Kerberos	[6]
Unit 5 Program Security: Non malicious Program errors – Buffer overflow, Incomplete mediation, Time-of-check to Time-of-use Errors, Viruses, Trapdoors, Salami attack, Man-in-the-middle attacks, Covert channels	[6]
Unit 6 Security in Networks: Threats in networks, Network Security, Controls – Architecture, Encryption, Content Integrity, Strong Authentication, Access Controls, Wireless Security, Honeypots, Traffic flow security, Firewalls – Design and Types of Firewalls, Personal Firewalls, IDS, Email Security – PGP,S/MIME	[6]

AD485C	PEC	LISP	3-0-0	3 Credits
Teaching Scheme: Lecture: 3 hrs/week		Examination Scheme: CA1: 10 Marks CA2: 10 Marks Mid Semester Exam: 20 Marks End Semester Exam: 50 Marks		

Pre-Requisites: Basic Logic, Set, Graph related concepts

Course Outcomes: At the end of the course, students will be able to:

CO1	To understand basic commands, Predicates, macro and function
CO2	To understand Recursion and I/O commands, List and arrays and other data structure
CO3	To understand search tools
CO4	To understand Macros, lexical scoping, lexical closures
CO5	Write programs using pattern matching logic
CO6	Write object-oriented programming code

Course Outcomes	Program Outcomes														
	P O 1	P O 2	P O 3	P O 4	P O 5	P O 6	P O 7	P O 8	P O 9	P O 10	P O 11	P O 12	PSO 1	PSO 2	PSO 3

CO6	1	1	1	1	1	-	-	-	-	-	-	1	-	1	1

Unit I-Lisp Introduction Atoms, lists, S-expressions, functions, lambdas, predicates, conditionals, recursion, iteration, printing, reading, properties, a-lists.	[6]
Unit – II - Search: The General Problem Solver Means-ends analysis, defining operators, blocks-world planning, Sussman Anomaly, interacting goals.	[6]
Pattern Matching: ELIZA Pattern matching, rule-based translation, a simplistic natural-language dialog system.	[6]
Unit – III -Search Tools A general search program, Heuristic search, best-first search, beam-search, hill-climbing, Heuristic search for the web.	[6]

Unit - IV - Advanced LISP Macros, lexical scoping, lexical closures, special variables, dynamic scoping, multiple values. Consing, destructive functions, and garbage collection. Interning symbols. Caching. Delaying computation. Avoiding unnecessary consing.	[6]
Unit V - Logic Programming Unification pattern matching. Backward chaining inference. Prolog. Writing programs in logic. Writing rules for efficient deduction.	[6]
Natural Language Syntactic parsing with a phrase-structure grammar. Using caching to improve parsing. Semantic and case-frame analysis. Using semantic constraints to resolve ambiguity.	[6]
Unit -VI -Object Oriented Programming in LISP CLOS: Common Lisp Object System. Classes, generic functions, and inheritance.	[6]

Textbooks:

ANSI Common Lisp by Paul Graham. It is published by Prentice Hall, 1996. ISBN 0-13-370875-6 (First Edition)

Course notes and other materials will be made available through the course website:

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester IV

AD400	PEC	Database Technology Laboratory	6-6-2	1 Credits
-------	-----	--------------------------------	-------	-----------

Teaching Scheme:	Examination Scheme:
Practical: 2 hours/week	CA1: 15 Marks CA2: 15Marks Practical and Oral Exam:- 20 Marks

Practical List:

1. Draw ER model for Bank/ Employee data management/College management.
2. Use DDL commands to design schema for Bank/Employee data management/College management using integrity constraints.
3. Use DML commands and Apply SQL operators to queries.
4. Write SQL queries for implementing functions, sub queries.
5. Execute the queries for implementation of Joins and create views.
6. Set transaction controls for schemas.
7. Write the basic PL/SQL Programs using control structures.
8. Write PLSQL code for Functions, procedures, triggers and cursors.
9. Perform backup and recovery operations on database.
10. Create collections and documents in MongoDB using command line

-------	-----	-----------------------------	-------	-----------

Teaching Scheme:	Examination Scheme:
Practical: 2hr/week	CA1: 15 Marks CA2: 15 Marks Practical and Oral Exam:-20 Marks

Practical List:

1	Setup java programming environment by using: a) Command Prompt b) Any IDE(Eclipse, Jcreator etc.)
2	Test the IDE setup by implementing small program.
3	Develop program to demonstrate use of IF statement and its different forms.
4	Develop programs to demonstrate use of i) Switch Case statement. ii) Conditional if(?)
5	Develop programs to demonstrate use of looping statement 'for'
6	Develop programs to demonstrate use of 'while' , 'do while'
7	Develop program for implementation of implicit type casting in Java Part I
8	Develop program for implementation of implicit type casting in Java Part II
9	Develop program for implementation of explicit type conversion in Java
10	a) Develop program for implementation of constructor b) Develop program for implementation of multiple constructors in a class
11	Develop program for implementation of different functions of String Class Part I
12	Develop program for implementation of different functions of String Class Part II
13	Develop program for an implementation of arrays in java
14	Develop program for an implementation of vectors in java
15	Develop program for an implementation of wrapper class to convert object into primitive
16	Develop program for an implementation of wrapper class to convert primitive into objects
17	Develop program which implements concept of overriding
18	Develop program which implements single and multi level inheritance
19	Develop program which implements multiple inheritances
20	Develop a program to import different classes in package
21	Develop program for implementation of multithreading operations Part I
22	Develop program for implementation of multithreading operations Part II
23	Develop program for implementation of try, catch block Part I
24	Develop program for implementation of try, catch block Part II
25	Develop program for implementation of try, catch, finally block
26	Develop program for implementation of throw, throws clause Part I

Shri Shambhu Patil (Yadavkar) Educational & Charitable Trust's

Sharad Institute of Technology college of Engineering, Yadav (Ichalkaranji)

416 121, Tal- Shani Dist- Kolhapur (MS) India

E-mail: contact@sitcoe.org.in & website: www.sitcoe.org.in

27	Develop program for implementation of throw, throws clause Part II
28	Develop minimum two basic applets. Display output with applet viewers and graphics. a) Develop program on basic applet. b) Develop a program using control loops in applets
29	Write a program to create animated shape using graphics and applets. a) Line and Rectangles b) Circles and Ellipse c) Arcs d) Polygons with fill Polygon methods
30	Develop a program to draw following shapes, graphics and applets. a) Cone b) Cylinders c) Cube d) Square inside a circle e) Circle inside a square
31	Develop a program to implementation of I/O stream classes
32	Develop a program to implementation of File stream classes

Shri Shantaram Patil (Yadvaykar) Educational & Charitable Trust's

Sharad Institute of Technology college of Engineering, Yadvay (Ichalkaranji)

416121, Tal- Shiroli Dist- Kolhapur (MS) India

Ph: 02322- 252796, 252896 Fax: 02322-252897

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester IV

AD408	PEC	Data Communication And Networking Laboratory	9-0-2	1 Credits
-------	-----	--	-------	-----------

Teaching Scheme:	Examination Scheme:
Practical: 2hr/week	CA1: 15 Marks CA2: 15Marks Practical and Oral Exam--20 Marks

Experiment List

- 1 Design a Wired LAN using line tester, configuration machine using IP addresses, testing using PING utility and demonstrate the PING packets captured traces using Wireshark Packet Analyzer Tool.
- 2 Implement a Program with following four options to transfer
 - a. Characters separated by space
 - b. One String at a time
 - c. One Sentence at a time
 - d. file between two RS 232D or USB ports using C/C++ (To demonstrate Framing, Flow control, Error control).
- 3 Implement a program for error detection and correction using Hamming Codes or CRC Experiment-2
- 4 Implement a program to simulate Go back N and Selective Repeat Modes of Sliding Window Protocol.
- 5 Implement a program to demonstrate sub routing and find the subnet masks.
- 6 Implement a program to simulate the behavior of link state routing protocols to find suitable path for transmission.
- 7 Implement a program using TCP socket for wired network for following
 - a. Say Hello to each other
 - b. File transfer
- 8 Implement a program for DNS lookup. Given an IP address input, it should return URL and vice versa.
- 9 Install and configure DHCP server and write a program to install the software on remote machine.
- 10 Study of any network simulation tools - To create a network with three nodes and establish a TCP connection between node 0 and node 1 such that node 0 will send TCP packet to node 2 via node 1
- 11 Configure RIP, OSPF, BGP using packet Tracer.

---------------	------------	---------------------------------	--------------	------------------

Teaching Scheme:	Examination Scheme:
Practical: 2hr/week	CA1: 15 Marks CA2: 15 Marks Practical and Oral Exam:-20 Marks

Practical List

Lab 1 : Introduction to R and RStudio , Installing R and R Studio (Linux& Windows) Lab 2: Getting started with loops and vectors -Create vectors.

Lab 3 : Perform vector indexing and slicing.

Lab 4: Creating matrices – Matrix operations – Applying Functions to Matrix Rows and Columns. Lab 5 :Creating lists – General list operations.

Lab 6: Creating Data Frames – Matrix-like operations in frames – Merging Data Frames. Lab 7 : S3 Classes – S4 Classes – Managing your objects – Input Output

Lab 8: Math and Simulations in R. Lab 9: Creating a JSON file

Lab 10 :Create a connection between R and MySql

Lab 11 : Create visualization in R -Line Graph and Histogram

---------------	------------	------------------------	--------------	------------------

Teaching Scheme:	Examination Scheme:
Practical: Thr/week	CA1: 15 Marks CA2: 15Marks Practical and Oral Exam:-20 Marks

Experiment List

1. Development of Composite Rotation Matrix.
2. Develop and arm matrix for Adept-1 SCARA robot.
3. Inverse Kinematics for Adept-i SCARA Robot
4. Eight Queen Problem.
5. Graph Structures and Paths.
6. Wumpus world problem.
7. Water Jug Problem.
8. KnightisTour.
9. Crypto Arithmetic Problems.
10. Implementing Searching algorithm.
11. Implement Breadth first search algorithm for Romanian map problem
12. Implement iterative deep depth first search for Romanian map problem.
13. Implement A* search algorithm for Romanian map problem.
14. Implement recursive best-first search algorithm for Romanian map problem.
15. Implement decision tree learning algorithm for the restaurant waiting problem.
16. Implement feed forward back propagation neural network learning algorithm for the restaurant waiting problem.

S.Y. (ARTIFICIAL INTELLIGENCE AND DATA SCIENCE) Semester IV

PRJ03	PROJ	Mini Project III	6-0-1	1 Credits
-------	------	------------------	-------	-----------

Teaching Scheme:	Examination Scheme:
Lecture: -- Practical: 2hr/week	CA1/25 marks CA1/23 marks ESE: -

Pre-Requisites: Basic knowledge of Communication skills (LSRW)

Course Outcomes: At the end of the course, students will be able to:

CO1	Acquire practical knowledge within the chosen area of technology for project development
CO2	Identify, analyze and handle programming projects with a comprehensive and systematic approach
CO3	Contribute as an individual or in a team in development of technical projects
CO4	Develop effective communication skills for presentation of project related activities
CO5	Formulate and propose a plan for creating a solution for the problem identified

Course Content:

The mini-project should be undertaken preferably by a group of 4 students who will jointly work and implement the mini-project. The group will select a project with the approval of the guide. A batch of practical / Tutorial will be divided into mini project groups. Mini project topics and the work for these groups in the batch will be guided by a teacher for the batch, preferably on one of the topics like Compiler Construction, Database Engineering, Operating System, Computer Graphics and Multimedia, Advanced Programming and latest developments and trends in Computer Science and Technology. The teacher will periodically assess the performance of individual student in the mini project, jointly with a teacher of another batch. Project group will submit hardcopy project report along with project demonstration software in CD and/or project hardware gadget at the term end.

MDC01	MC	Constitutions of India	1-0-0	Audit
Teaching Scheme:		Examination Scheme:		
Lecture:-1hr/week		CA1:25marks CA1:25 marks		

Constitution of India – Basic features and fundamental principles

The Constitution of India is the supreme law of India. Parliament of India cannot make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the "basic structure" of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of "Constitutionalism" – a modern and progressive concept historically developed by the thinkers of "liberalism" – an ideology which has been recognized as one of the most popular political ideologies as a result of historical struggles against arbitrary use of sovereign power by state.

Course content

1. Meaning of the constitution law and constitutionalism
2. Historical perspective of the Constitution of India
3. Salient features and characteristics of the Constitution of India
4. Scheme of the fundamental rights
5. The scheme of the Fundamental Duties and its legal status
6. The Directive Principles of State Policy – Its importance and implementation
7. Federal structure and distribution of legislative and financial powers between the Union and the States
8. Parliamentary Form of Government in India – The constitution powers and functions of the President of India
9. Amendment of the Constitutional Powers and Procedure
10. The historical perspectives of the constitutional amendments in India

Teaching Scheme:	Examination Scheme:
Lecture: 1 hrs/week	CA1:25marks
Tutorial: NA	CA1:25 marks
Practical: NA	

Pre-Requisites: Communication Skills, Aptitude Skill- I

Group A
Verbal Ability (12Hrs) (Compulsory)

Course Objectives:

1	To study basics of sentences and its structure
2	To study the tenses and its use in daily life
3	To study the basics of speeches and voices
4	To study the basic concepts of modal verbs
5	To study the different Phrases, Idioms and Proverbs
6	To build the vocabulary for day to day life

Course Outcomes: At the end of the course, students will be able to:

1	Understand basic concepts of sentences and its structure
2	Understand the tenses and its use in daily life
3	Explain basic uses of speeches and voices in day to day life
4	Understand the use of modal verbs in sentence construction
5	Summarize various Phrases, Idioms and Proverbs
6	Summarize different words used in daily life

Group B

Aptitude (12Hrs) (Compulsory)

Course Objectives:

1	To study multiplications, squares, square roots, cubes and cube roots to solve aptitude problems
2	To understand the concepts of Number system
3	To study the basics of aptitude skills like percentage, average, ratio and proportion, etc.
4	To study the various speed, time and distance basic concepts
5	To understand the concepts of business aptitude
6	To understand the Concepts of Geometry and Venn diagram in Aptitude

Course Outcomes: At the end of the course, students will be able to:

1	Understand speed math techniques to solve aptitude problems
2	Summarize number systems in detail
3	Explain basic aptitude techniques related to Percentage, Average, Ratio Proportion and Fraction
4	Understand speed, time and distance concepts
5	Summarize the concepts of Business aptitude using basic aptitude
6	Solve the aptitude problems on Geometry and Venn Diagram

Languages (Any One) C Programming (Technical Language) (24Hrs)

Syllabus for C Programming

Course Objectives:

This course provides an opportunity to enhance acquisition of the fundamental elements of the C programming language. Emphasis is on the progressive development of basic programming syntaxes and essentials used in C programming.

Course Outcomes: At the end of the course, students will be able to:

1	Illustrate the concept of Function Types, and its type
2	Make use of Structures and Unions.
3	Make use of Pointers
4	Illustrate the concept of File handling in C programming.

Mapping of course outcomes with program outcomes

Foreign Languages (Any One)

Japanese Language Course I (12Hrs)

Course Objectives:

This course is designed to introduce students to the everyday language of Japan. Units will be organized around natural conversational topics, leading students from fundamental aspects of grammar to readings in simple texts. Students will learn vocabulary, expressions, and sentence structures to become able to meet basic communication needs in Japanese. This course comprises all four skills (speaking, listening, reading, and writing) of language.

Course Outcomes: At the end of the course, students will be able to:

1	Converse in Standard Japanese to perform basic communicative tasks (e.g., exchange greetings/personal information, give time/directions/daily activities)
2	Make use of Japanese vocabulary effectively.
3	Demonstrate reading comprehension

Mapping of course outcomes with program outcomes

Course Outcome	Program Outcomes

Foreign Languages

German Language Course I (12Hrs)

Course Objectives:

Choice-Based Soft Skills program offers students a choice to select the course that will meet the requirements of their overall personality development. Particularly this course helps the student in developing and improving his/her literary comprehension skills.

Course Outcomes: At the end of the course, students will be able to:

1	Introduce herself or himself in German.
2	Understand alphabets, numbers in German language
3	Make basic and easy sentences required in day to day situations
4	Read, write, speak and listen basic and simple text in German.

Course Description

Internship / Training is educational and career development opportunity, providing practical experience in a field or discipline. At the end of the fourth semester, every student should undergo practical training in an industry / professional organization / Research laboratory with the prior approval of the HoD/TPO/Principal of the college and submit the report along with the completion certification from the Industry/ Organization. The report will be evaluated during the fifth semester by the department.

Course Learning Outcomes:-

After successful completion of the course, students will be able to

1. Verify the Technical knowledge in real industrial situations.
2. Develop interpersonal communication skills.
3. Discuss activities and functions of the industry in which the Internship/training has done.
4. Write the technical report.

Prerequisite: - Basics of (Programme) Engineering, Good written and Oral Communication.

Guideline for Students:-

1. Arrive at work as per schedule, ready to work and stay for the agreed upon time.
2. Present yourself in a professional manner at all times, including being appropriately dressed at workplace.
3. Communicate any concerns with your supervisor and the internship/Training coordinator in a timely manner and respectfully.
4. Demonstrate enthusiasm and interest in what you are doing, ask questions and take the initiative as appropriate.
5. Complete and submit assigned tasks by designated timelines. Meet all deadlines.

Student's Diary/ Daily Log

The main purpose of writing daily diary is to cultivate the habit of documenting and to encourage the students to search for details. It develops the students' thought process and reasoning abilities. The students should record in the daily training diary the day to day account of the observations, impressions, information gathered and suggestions given, if any. It should contain the sketches &

drawings related to the observations made by the students.

The daily training diary should be signed after every day by the supervisor in charge of the section where the student has been working. The diary should also be shown to the Faculty Mentor.

Student's Diary and Internship Report should be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the SITCOE immediately after the completion of the training. It will be evaluated on the basis of the following criteria:

- Regularity in maintenance of the diary.
- Adequacy & quality of information recorded.
- Drawings, sketches and data recorded.
- Thought process and recording techniques used.
- Organization of the information.

**Internship
Report**

After completing the internship, the student should prepare a comprehensive report to indicate what he/she has observed and learned in the training period. Daily diary will also help to a great extent in writing the industrial report since much of the information has already been incorporated by the student into the daily diary. The competent authority should sign the training report. The Internship report should be evaluated on the basis of following criteria:

i. Originality.

Adequacy and purposeful write-up.

Organization, format, drawings, sketches, style, language etc.

Variety and relevance of learning experience.

v. Practical applications, relationships with basic theory and concepts taught in the course.

Evaluation of Internship/Training

The student should be evaluated based on his training report and presentation, before an expert committee constituted by the concerned department as per norms. The evaluation will be based on the following criteria:

- Quality of content presented.
- Proper planning for presentation.
- Effectiveness of presentation.
- Depth of knowledge and skills.
- Attendance record, daily diary, departmental reports shall also be analyzed along with the Internship Report
